Velkscala 1.0: CDT Proxy vs. CDT Empirical

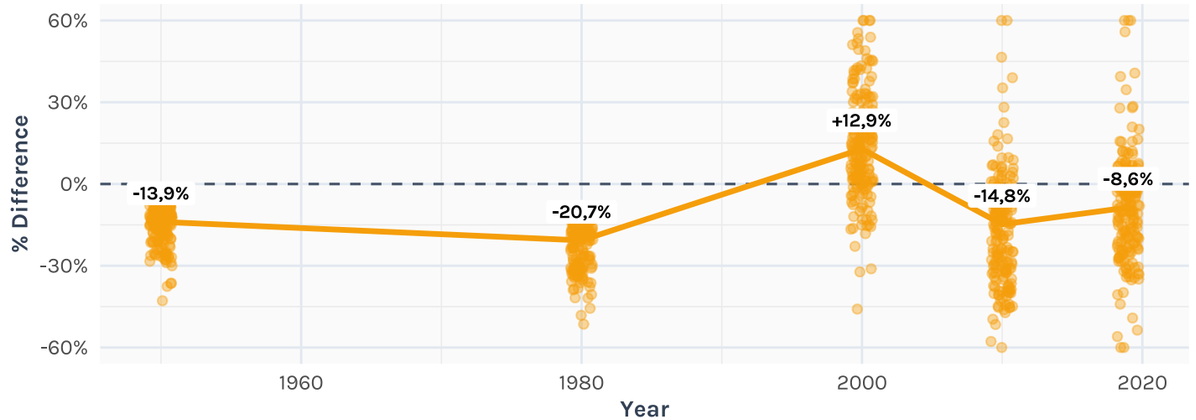

Out-of-sample testing | Age/Sex: 69,2% Acc. | Births: 83,1% Acc. | Deaths: 78,9% Acc.

Multinomial Logit, R^2

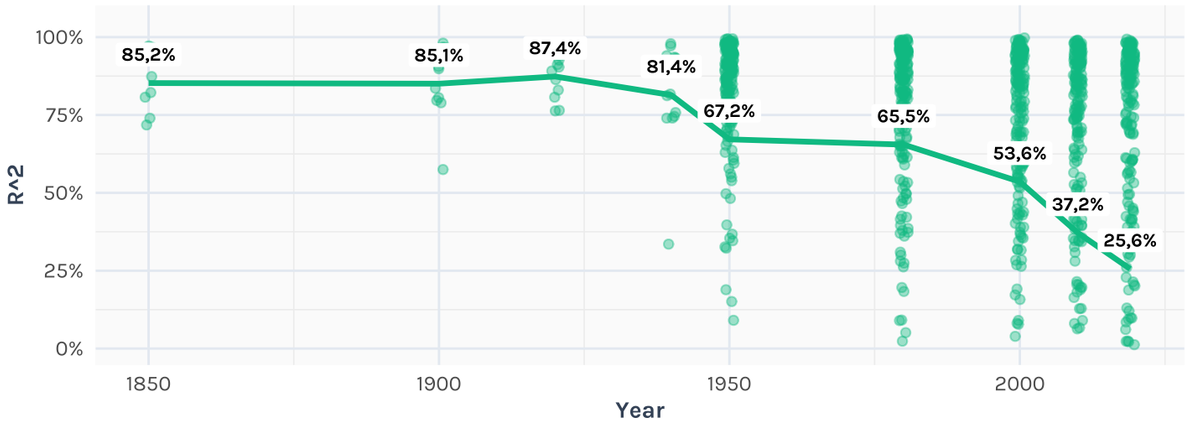

Births Relative Error (%)

Median Country Deviation

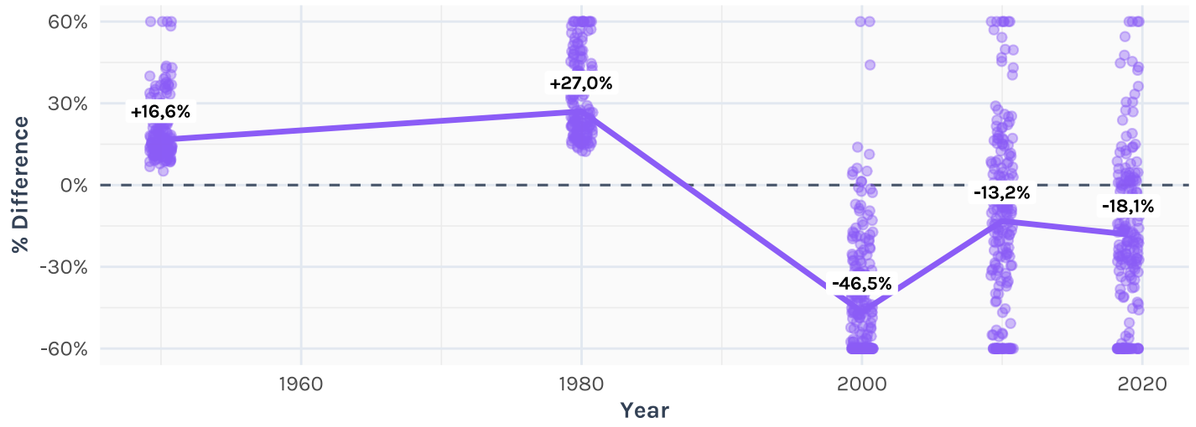

MNL Clamping, R^2

PAVA/Whittaker-Henderson (logistic kernel)

Deaths Relative Error (%)

Median Country Deviation

CDT: Contemporary Demographic Transition. Data: HMD, UNWPP, Niva et al. (2023); Velkscala 1.0 (2026)
Accuracy rates reflect R^2 and 1 - MAPE for age/sex vs. births/deaths respectively.

Proxy models are discarded after 1950AD in final composites; UN data is used by Velkscala 1.0 after that period.
